Kabootar (2014) DVDScr Hindi Full Movie Online Free
Down 5.Q: Stata: find index of last entry greater than x in
vector Is there a way to get the index of the last entry
greater than x (in this case, 9) in a vector like this? x = 9
v = (1 3 4 9 2 1 2 2 1 2 2 2 3 4 8 8 8 6) Expected result: 6
A: It might be that what you want is `ixth_minus_1`. If this
is so, then the following code will work for you: `sysuse
auto, clear do forvalues i=1(11) keep if _n == `i' end` This
should keep the last 11 cars that are greater than 9. A:
Well, you can do this with program logic/conditional logic
by setting up a variable x that is one beyond the largest
entry. Then use that variable to specify the sequence of
numbers to look at. `clear gen x = . gen out = 1 * look at
sequence of all numbers in x that are larger than x gen
mult = num[_n+1] > _n keep if out == 0 and mult
replace out = out + 1 list` For more info, see and Q: How
to add many values to the list without replacing them?
`def add(lst, item): if lst == []:`
