=============== FuzzyDupes was made by Kohlhase & Müller GmbH who are an independent IT consulting company. We are located in Germany and run a small IT support team and are both also a regular and avid user. Back in 2007 we came across a project that was looking for code solvers because their primary purpose was to do duplicate detection and removal. Over the years we implemented an Excel sheet which allowed us to automate a lot of the process by searching the database from an Excel spreadsheet. This project came to us because our client requested a "tool" that could be used internally for duplicates in their database. They would be able to see how many duplicates were created, what fields were duplicated and even if certain fields were duplicated (birth date, for example). This was actually a pretty big project for us because the database had to be scripted up, fields could be added and modified, and finally installed and tested. The client kept the Excel sheet in its database to help with the process, and in case they encountered a new keyword or new types of files. So the tools is only able to deal with the files that the client has specified through the GUI. We hope you like the application and it was able to help you out with your duplicates. It's still somewhat of a beta, but we would like to hear your feedback and develop it further.
