In 'Mask', this fully realized character is the sequel to 2005's 'Daredevil,'. Unlike almost any superhero from overseas, the.. Ravi Agarwal and his beautiful wife....Q: How to retrieve the values from the class Below is the class, which I use to create a w3wp process. public class BaseProcess { public static void Do() { //Code } } How can I retrieve the values of Code when I call it from the below class (say, from the class Instance)? public class Instance { public void Process() { var base = new BaseProcess(); base.Do(); } } A: You can't. The Process method has no idea of the instance method call to do, so you can't just retrieve the value of code from inside the method call (because there was no way for the process method to know about that). I don't know what you're trying to achieve, but it would make more sense to write the Process method in the same class as your base class (so you can just use BaseProcess.Do() from the called method), or make the Process method non-static and static (thus creating an instance of the BaseProcess class). Q: Regex inside if statement I have the following scenario where I have an if statement that checks to see if a number (called bid) is between another set of numbers. There are several reasons why bid is not between those numbers. So I have added an ELSE if the number is not there (line 17). I'm not very proficient in Java c6a93da74d
