

if you have a delcam powermill, your machine should be updated automatically when you open the program. if you experience a problem, such as a missing tool or a missing driver, go to the delcam support site and follow the instructions there. in addition, powermill also has a new option to create a data file that can be imported into other programs. this will allow the user to create a complete cut-list of all the toolpaths required to machine a particular part. this can be an efficient way of creating and storing a complete set of cut-lists, and can also make it much easier to automate certain tasks. integrated automatic tooling generation in the blades module has also been improved with an option to export tooling information and tooling specification into an nc file format. with the option to save the tooling to an nc file, the user has the ability to import tooling into powermill in a number of different ways. this is useful if tooling is already available in the shop floor and the user wishes to import the tooling into powermill. furthermore, powermill 2012 has been completely redesigned and rewritten. some of the new features include an improved graphic interface, a new menu-based programming system, an improved macro language for cutting and toolpaths, the ability to operate on a single blade and build up the blank, as well as a simplified setting tool. and finally, there is a free upgrade from powermill 2011 to powermill 2012

available. this means users who have powermill 2011 can upgrade to the latest version for free, so long as they have the software available.

Delcam PowerMill 10 SP6 PowerMill 2010 RC1 PowerMill 10 SP7

in both examples, delcam says smoother tool-axis changes can be achieved by increasing the density of the points in these areas. the user can specify the maximum angle that the tool axis can move between points. extra points are inserted automatically to ensure the specified maximum angle is not exceeded. the result is more even movement of the machine and a better surface finish, with no risk of dwell marks. the smoother motion also reduces wear on the machine. the
