Imagine a world without dates. Having dates is easy. You may have had a calendar or time-management software before, but there are a couple of features that are missing in Mobile Dates.

- Single menu, all in one screen.
- Appointment (Date/Time) view.
- You can remove the event from the Mobile Dates application.
- Create an event directly from the application.
- Supports more than 2000 local holidays in more than 70 countries.
- Calendar/Time management functionality in a Palm OS calendar application.
- Supports export to Memopad.

Keywords: Mobile Dates, Calendar, Holiday Mobile Date

### New in Mobile Dates 1.1.0.1 Mobile Dates Application

(MobileDates) is a calendar application for your Palm Treo smartphone. A user can create multiple holidays/events/appointments in a calendar and synchronize them with a remote database. Furthermore the user can synchronize the calendar entries to the palm

desktop using our MobileDates to Desktop sync tool. This version of MobileDates has a few new features:

- Added a new holiday page to MobileDates.
- Added a new event page in MobileDates.
- Updated the holiday dates.
- New buttons to add holiday / event.
- Added a new application icon for MobileDates.
- Included some bug fixes.

Requirements:

- Palm OS 5.x or later.
- Web browser for internet access.
- 2.5Mb free ram.

Key features:

MobileDates is the first and only application which can provide the following features for your Palm/Handheld: · Watch the event in a list format (Item view). · List view of all events (in a variety of formats). ·

Add/Update/Delete events in a list. · Add a Note to an event. · Add/Delete the group categories. · The ability to print the event

details. · View the event details with the description of the event. · Review the details of a particular event with the description. · Export the event details to Memopad. · Add, Update and Delete the groups. Release History: 1.00 January 2005 Differential effect of 5-HT<sub>3</sub> receptor antagonists on the firing of 5-HT<sub>3</sub> receptor-containing dorsal raphe neurones in vivo. The effect of the 5-HT<sub>3</sub> receptor antagonists, granisetron, ondansetron and ramosetron on the firing of 5-HT<sub>3</sub> receptor-containing dorsal raphe neurones in anesthetized rats was studied in vivo. The antidromic stimulation of the dorsal raphe with pulses of 1.5 mA for 60 msec produced bursts of action potentials in the ipsilateral dorsal raphe neurones. All three antagonists caused a significant reduction in the mean firing rate, with a greater reduction produced by the 3-fold more potent granisetron. The threshold current was increased significantly by granisetron and ondansetron, but not by ramosetron. These

results indicate that 5-HT3 receptors can exert a tonic inhibitory influence on the firing of 5-HT3 receptor-containing dorsal raphe neurones. Q: c++ how to add fields to
