With the new iOS app, Adobe integrates with the iPad Pro 2, and users can start a session, import a catalog, and then launch Photoshop Sketch to get started. Users can tag images and select objects when working on iPad, and further refine those selections as they refine the shapes and colors on the screen or add notes in Photoshop Sketch. Project management remains available on the Mac or Windows version of Photoshop, and saved adjustments such as color balance and levels remain available with Snapshots. Also in the Mac/PC version, the new Photoshop Sketch is available on the Transmit module under Preferences. It replaces the old Transmit module known as Simulate Print. Simulate Print allowed users to manipulate files that were saved in Photoshop to create a simulated print or sequence that would be sent as a file to an Apple device.

Niche use cases are: preflight, fine tuning of images, accumulating images to be sent to a central image server, and planning a print or broadcast. It is still in beta, but may become the standard for editing the documents in Transmit. To use Sketch in Transmit, use the selected tool with the file selected as the active tool. Sketch is in the left panel, and you will see a preview of the image on the right. The preview will open the same image as what you see in the dialog box on the left when you select the embedded tool in the image. Along with the new Adobe Creative Cloud apps, Adobe is also rolling out a number of new campaign-driven marketing campaigns called "Reimagine Your Workflow." It includes bringing a new tablet-optimized workflow to Photoshop.

After years of usability and performance issues, the new Adobe Photoshop started a gradual shift to the Web. The new features it brings along with this change can be summarised into the following flow: Given that Adobe Photoshop was once the most used graphics application in the world, it defies logic that Adobe was producing small-screened and web-orientated apps. With the new features of the new Photoshop (and the first native per-device version for iOS and Android), greater emphasis is now placed on the web. However on the native versions, Adobe Photoshop will now have a set of features that not only make it ideal for web and mobile editing, but also speed up the workflow and bring more features and functionality to the web. Adobe is working hard on bringing the best features of native apps like Photoshop to the web. Among the notable features that have threatened to bring in native-app like features to Photoshop are Face Recognition, Autokey, and better video editing capabilities. Adobe also introduced new tools to its Creative Cloud subscription with the ability to work with multiple accounts at the same time, batch processing photos and videos, and collaborative editing.
