It all seems pretty straightforward, and the checklist in the app catalog is pretty self-explanatory. The only change to the process is your ability to export to mobile devices via Wi-Fi. Long-awaited initial features like the Layers panel, straightening tools, channels and masks are all available in the new version. The basic alteration tools are similar to what you'd expect from Photoshop, with the exception of the Radial Filter. While Adobe has mostly maintained the same basic foa, they have added features that make the program more flexible and user-friendly. This version may be considered a "beta" by some, but to me and my photographer friends, Lightroom feels like a full-fledged image editing program.

There are two key differences between BLOB and the old Chunked Transfer protocol: Firstly, BLOB provides you with individual image streams instead of one large file, allowing you to view, rotate, resize and move your images without holding all your images up at once. The second key difference is that you need only one computer to access all the photos and layers at once - making it faster.
